

## IN THE SPECIFICATION

Please amend paragraph [0019] of Applicants' published specification as follows:

As a scheme for transmitting static media such as and static image using RTP, there is  
Generic RTP Payload Format for Time-lined static Media  
(~~http://standards.ericsson.net/westerlund/draft-westerlund-avt-rtp-static-media-00.txt~~). This is a  
scheme in which a duration header is provided to express playback time (duration) and has a  
feature in which playback time is sent to the receiving side. Moreover, the use of RTP instead of  
TCP makes it possible to employ real-time transmission of the static media.
